

STEAM

Science, Technology, Engineering, the Arts and Math are similar fields of study in that they all involve creative processes and multiple methods of inquiry and investigation. Teaching these relevant, in-demand skills will prepare students to become innovators in an ever-evolving world, not only for the future of the students themselves but for our world.

STEAM lessons will employ project-based learning that crosses each of the five disciplines and fosters an inclusive learning environment in which all students are able to engage and contribute. Through this holistic approach, students can exercise both sides of their brain at once, while increasing problem-solving and creativity skills.

STEAM will be taught on Wednesdays with a variety of topics for the month. Please review the calendar to see the chosen topic. Thank you.
