Summer 2026

Announcing Services!

GATE PM proudly offers enrichment and academic support services for homeschool students in grades K–2, with some exceptions available for older students based on individual needs, such as IQ assessment. Our program provides engaging instruction and enrichment opportunities in areas such as reading, math, science, art, chess, Spanish, engineering, hands-on projects, and other specialty classes designed to encourage creativity, critical thinking, and academic growth. In a nurturing small-group or individual environment, students are given opportunities to explore new interests, strengthen foundational skills, and develop confidence through hands-on learning experiences. In addition, we offer private tutoring and assessments to identify students' strengths and weaknesses.

Our purpose is to provide homeschool families with high-quality educational enrichment that inspires curiosity, promotes lifelong learning, and helps every child reach their fullest potential. We are excited to offer this service and assist in building brighter tomorrows!

Benefits of Enrichment Learning

Enrichment programs provide students with opportunities to grow beyond traditional classroom learning by encouraging creativity, curiosity, and higher-level thinking skills. Through engaging, hands-on activities and interactive instruction, students strengthen problem-solving abilities, communication skills, and self-confidence while developing a deeper love for learning. Enrichment experiences also help children discover new interests and talents, build academic motivation, and become more independent learners. By exposing students to a variety of subjects and creative challenges, the GATE pm program will prepare children to think critically, adapt confidently, and succeed both academically and socially.
